

PendoTECH Launches New Sanitary Flange Sensor for Critical Bioprocess Operations

Princeton, NJ (June 2, 2014) - PendoTECH is now offering ¾ inch and 1 inch Sanitary Flange Sensors in addition to their hose barb inventory. Enabling a smooth transition from tubing to devices without the requirement for special adapters, this new design will be followed by the launch of the flange to barb design in early 2015. These disposable sensors will not only easily connect to filters and tubing; but eliminate the requirements of parts cleaning, tracking, sanitization, and possible re-sterilization of reusable measurement devices.

Single use technology that is robust enough for extensive re-use, PendoTECH's Sanitary Flange Sensors are manufactured in an FDA Registered, ISO certified facility. All polymeric materials meet industry requirements and the sensors arrive to the customer ready to use and with a certificate of quality.

About PendoTECH

PendoTECH is committed to providing value-added products and services to companies in the biopharmaceutical industry for enhanced development and production of products derived mainly from biological systems. As the number of biologicals produced by cell culture increases and the industry matures, new technologies and process approaches are available for comparison to the existing ones for evaluation of enhanced production output and reduced cost of goods.
